

GREEN ROOM

Router Setup Guide

Everything you need to connect your phone to Green Room using the travel router. No internet required.

WHAT YOU NEED IN FRONT OF YOU

- Your MacBook Pro
- Your iPhone
- The Slate AX router (the little black box)
- The USB-C cable that came with the router
- A power source (laptop USB-C port, wall charger, or battery pack)

GOOD NEWS: You do NOT need internet for any of this. The router creates its own private WiFi network just for your devices.

1 POWER ON THE ROUTER

1. Plug the USB-C cable into the router
2. Plug the other end into your MacBook's USB-C port (or a wall charger)
3. Wait about **30 seconds** — the lights will blink then settle
4. When the **WiFi light stays solid**, it's ready

2 FIND THE WIFI NAME + PASSWORD

1. Flip the router over — look at the **sticker on the bottom**

You'll see something like:

WiFi Name:	GL - AXT1800 - xxx
Password:	goodlife (or similar)

TIP: Take a photo of the sticker — you'll need the name and password for both devices.

3 CONNECT YOUR MACBOOK

1. Click the **WiFi icon** in your menu bar (top right)
2. Find the router's WiFi name (**GL - AXT1800 - xxx**)
3. Click it — enter the password from the sticker

HEADS UP: Your Mac will say "**No Internet Connection**" — this is normal! You don't need internet. Just dismiss the warning.

Then do this important extra step:

4. Open **System Settings** (Apple menu → System Settings)
5. Click **Wi-Fi** in the sidebar
6. Find the router's network — click the little **(i)** button next to it
7. Find "**Limit IP Address Tracking**" and turn it **OFF**

4 CONNECT YOUR IPHONE

1. Open **Settings** on your iPhone
2. Tap **Wi-Fi**
3. Find the same router WiFi name (**GL - AXT1800 - xxx**)
4. Tap it — enter the same password from the sticker

HEADS UP: Your iPhone will say "**This network has no internet.**"
Tap "**Use Without Internet**" or "**Stay Connected.**"

CRITICAL: If you skip this step, your iPhone will **silently switch back to cellular**. The puppet will stop moving and you won't know why. This is the #1 gotcha.

Same extra step as the Mac:

5. Tap the **(i)** next to the router's network name
6. Turn **OFF** "Limit IP Address Tracking"

5 OPEN BLENDER + GREEN ROOM

1. Open **Blender** on your MacBook
2. Load a puppet (or use your test file)
3. Press **N** to open the side panel — find the "**Green Room**" tab
4. Click "**Connect My Phone**"
5. You'll see: **Listening on 192.168.8.xxx:11111**

WRITE THIS DOWN: Write down that IP address (the **192.168.8.xxx** part) — you need it for the next step.

6 SET UP LIVE LINK FACE

1. Open the **Live Link Face** app on your iPhone
2. Tap the **gear icon** (settings) in the top left
3. Under "**Target**", enter the IP address from Step 5
4. Make sure the port is **11111**
5. Go back to the main screen
6. Tap "**Live**" to start streaming

7 CHECK THAT IT WORKS

Look at your MacBook. The puppet should be moving with your face.

- Open your mouth → puppet's mouth opens
- Blink → puppet blinks
- Turn your head → puppet's head turns
- Smile → puppet smiles

SUCCESS: If the puppet is moving with your face — **you're done. It works.**

TROUBLESHOOTING

"I don't see the router's WiFi"

- Is the router plugged in? Check that the lights are on.
- Wait 30 more seconds — it takes a moment to boot up.

"The puppet isn't moving at all"

- Is your iPhone still on the router's WiFi? Check Settings → Wi-Fi. iPhones love to silently switch back to cellular.
- Did you type the IP address correctly in Live Link Face? One wrong number and it won't connect.
- Is Live Link Face streaming? It should show "Live" with a green dot.

"The puppet moves but it's choppy"

- Use the **5GHz** band if the router broadcasts two networks (2.4 and 5).
- Move the phone closer to the router.

"My Mac keeps switching to a different WiFi"

- Click WiFi icon → (i) next to the router's network → turn on "**Auto-Join**".
- Forget other nearby networks temporarily if your Mac keeps jumping.

"Live Link Face says the port is in use"

- In Blender, click "**Disconnect**" in the Green Room panel, wait a second, then click "**Connect My Phone**" again.

PACKING LIST FOR SATURDAY

CADRE 40th Celebration — April 12, 2026

- MacBook Pro + charger
- iPhone
- Slate AX router (the little black box)
- USB-C cable for the router
- Power source for router (battery pack or MacBook USB-C port)
- Router WiFi name + password (photo of the sticker)
- This guide on your phone, just in case

Green Room — CADRE Lab, SJSU
